

Trenches Fund

Financing Open Source Maintainers while they Build in the Trenches

Open source runs the world—on the unpaid, overworked shoulders of a few.

- Almost 60% of maintainer burnout have quit or considered quitting
- Lack of a harmonized way of updating dependents of their project as most users expect instant fixes to problems
- Survey by sonarsource shows that 38% of open source maintainers cited not getting paid enough as their next reason for quitting

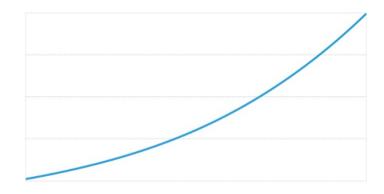

Open source Maintainer difficulties

- Maintainers have access to only traditional methods of receiving contributions
- Funding options exclude tokens that can be traded for SOL and stable coins
- Reliance on established institutions like Solana Foundation or awesome-solana repository from Helius for reach

Cause of Problems

User Feature Demands

Contributions

Commits

Traditional Funding Rails

- Contributions are done via traditional finance & fiat
- Long wait times to receive funds especially for KYC requirements
- Poor reach for other funding avenues like selling Solana merchandise for a commission

Existing players solving it...but poorly

Code Hosting Platforms like Github Sponsors

- Relies on traditional finance like banks
- Expensive transaction costs & currency exchange fees
- ✓ Long wait times

- No onchain tokens and liquidity
- Transfer of funds are not instant
- Visibility of contributions can discourage reimbursements

- Processing fees as high as 6%
- Long Wait Times for disbursement of funds
- Geographic restrictions especially due to geopolitics

- GitHub ecosystem lock-in, low external visibility
- Hard to split or manage funds transparently
- Individual-focused, not team-friendly

Here's how our approach stands out...

- Onchain access via native SOL, airdrops or other liquid tokens
- Interest earning contributions using mechanisms like staking and liquidity pools
- Fast confidential transfers with no processing fees
- Team friendly using DAO management and multisignature wallets using Squads smart contracts

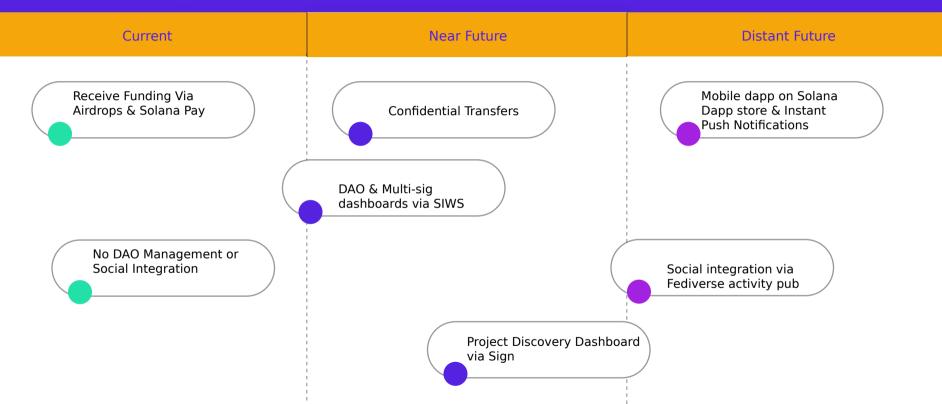

Introducing Trenches Fund

Making it happen (Use-cases)

Why Now?

Solana is growing fast and attracting projects in various industries outside of finance like AI, GPU compute, Biomedicine and many more...

Solana validator upgrades allow this project to reach it's full potential

- Activation of confidential transfers
- More signature validations like Secp256k1 & Secp256r1
- Increased liquidity in DEX volumes
- Free tier infrastructure offers from likes of Helius and Triton One

Why Now? / Version2

Access to more funding opportunities

- Tradable tokens like in-game tradable virtual currencies
- Regulatory Clarity especially on stablecoins
- Mainstream Acceptance of cryptocurrency payments
- Partnerships for merchandise that promotes Solana ecosystem

Why are we the ones to do it?

Successfully launched two open source projects with over 5k downloads with support from the Solana Foundation

Where will we be next year if we win the hackathon?

How we will keep the lights on?

- Trenches Fund is a public good initiative. Funding will be based on donations from the community
- Partnerships with Solana leading projects and the Solana Foundation.
